XX
XX      Novel gene cluster responsible for synthesis of leinamycin in
XX      Streptomyces atroolivaceus useful for making various peptide and/or
XX      polyketide, and/or hybrid polypeptide/polyketide metabolites.
XX
XX      Claim 13; Page 145-149; 185pp; English.
XX
XX      The present invention relates to the isolation of the Streptomyces
XX      atroolivaceus leinamycin (lnm) biosynthesis gene cluster containing 71
XX      open reading frames (ORFs) (ORFs -35 through -1, ORFs lnmA through lnmZ,
XX      and ORFs +1 through +9). Leinamycin is a novel anti-tumour antibiotic
XX      produced by several Streptomyces species. It exhibits broad spectrum
XX      antimicrobial activity against Gram-positive and Gram-negative bacteria,
XX      but not against fungi. The polypeptides encoded by the lnm biosynthesis
XX      gene cluster ORFs are useful for chemically modifying a molecule in a
XX      host cell. The host cell is a bacterium or eukaryotic cell, including a
XX      mammalian, yeast, plant, fungal, or insect cell. The molecule is an
XX      endogenous metabolite produced by the host cell or exogenously supplied
XX      metabolite, or an amino acid, and the polypeptide is a peptide synthetase
XX      or amino transferase. The polypeptides encoded by the lnm gene cluster
XX      are useful for converting an apo-carrier protein to a holo-carrier
XX      protein. lnm shows potent antitumour activity in tumour models in vivo.
XX      The lnm gene cluster modules and/or catalytic domains are useful for
XX      making various peptide and/or polyketide, and/or hybrid
XX      polypeptide/polyketide metabolites. The proteins encoded by the ORFs are
XX      useful alone, or in combination with other active domains to modify
XX      various target substrates. The lnm gene cluster is useful to upregulate
XX      endogenous lnm production to permit lnm production in cells and/or to
XX      make various modified lnm, lnm, its analogue, or other polyketide,
XX      peptide or hybrid polyketide/peptide metabolites are useful as
XX      therapeutic agents, to treat a number of disorders, depending upon the
XX      type of metabolites. ABU11341-ABU11411 represent the proteins encoded by
XX      ORFs of the S. atroolivaceus leinamycin biosynthesis gene cluster

 XX Claim 19; Page 10; 82pp; English.
 XX The present sequence is a peptide inhibitor of serine protease activity
 associated to the NS3 protein of human hepatitis C virus (HCV). The
 peptide is a result of modification of one of the peptide sequences
 obtained by proteolytic action of NS3 protease on HCV polypeptide
 comprising junction sites selected from NS3/NS4A, NS4A/NS4B, NS4B/NS5A
 and NS5A/NS5B. The peptide is capable of inhibiting 50% of the NS3
 protease activity at a concentration of 4.0 micro molar (IC50). The
 inhibitor is used for derivation of binding or inhibition assays of the
 HCV NS3 protease and preparation of drugs for non-A non-B hepatitis.

CC The present sequence is one of a large number of peptidic inhibitors of
CC hepatitis C virus NS3 serine protease. HCV infection can result in
CC chronic hepatitis and cirrhosis of the liver, and may lead to
CC hepatocellular carcinoma. Currently no vaccine nor established therapy
CC exists. The present peptide is a reversible, non-covalent inhibitor that
CC is based on the P and P' regions of the natural substrate of NS3. The P'
CC part of the inhibitor is optimised to achieve maximum binding energy
CC through interaction with the S' region of the enzyme. The peptides were
CC synthesised on solid phase by the continuous-flow Fmoc-polyamide method.
CC The ability of the compounds to inhibit NS3 protease was evaluated using
CC a complex comprising the NS3 protease domain and a modified form of the
CC NS4A peptide, Pep 4AK. A substrate (peptide 4AB) based on the sequence of
CC the NS4A/NS4B cleavage site of the HCV polyprotein was used. The ability
CC of the disclosed peptides to inhibit cleavage of the substrate by the
CC complex was measured and some of the peptides were found to be potent
CC inhibitors of HCV protease. The compounds can be used at micromolar and
CC nanomolar levels to treat or prevent hepatitis C or a related condition

PT New peptides useful, e.g. in the treatment of or reduction of viral load
PT of hepatitis C virus and associated conditions, e.g. liver fibrosis,

XX
PS Example 3; Fig 7; 30pp; English.

XX
CC This invention relates to novel hepatitis C virus (HCV) protease
CC inhibitors. Specifically, these inhibitors are small, hydrophobic
CC peptides that work by affecting the activity of the HCV serine protease
CC NS3, or preventing NS3 activation by inhibition of its co-factor NS4A.
CC Chronic infection with HCV can lead to serious sequellae including
CC Chronic active hepatitis, cirrhosis and hepatocellular carcinoma, as well

CC as HCV associated conditions including liver fibrosis, necrosis,
CC inflammation or bile duct changes. The present invention describes these
CC peptide inhibitors as virucides, and as such they can be used to inhibit
CC HCV replication and reduce the viral load. They also have hepatotropic
CC and antiinflammatory activity and can be described as cytostatic.
CC Furthermore, the antiviral peptides derived from the relevant conserved
CC NS3 or NS4A domains can be used to treat other viruses including the
CC dengue fever virus and the bovine viral diarrhoea virus. This peptide
CC sequence, peptide 12 (SeqID 28), is part of the C-terminal deletion
CC library that was used to identify the minimal domain of NS4A that is
CC required for binding to the NS3 protease, and hence identify inhibitor
XX

XX
CC The invention relates to novel quinoxaliny macrocyclic derivatives (I)
CC and (II). Further disclosed is a method to inhibit the replication of
CC hepatitis C virus, comprising supplying a hepatitis C viral NS3 protease
CC inhibitory amount of a compound of the invention. The method further
CC comprises concurrent administration of an additional antihepatitis C
CC virus agent (alpha-interferon, beta-interferon, ribavirin or adamantane).

CC The anti-hepatitis agent is an inhibitor of hepatitis C virus helicase,
 CC polymerase, metalloprotease or internal ribosome entry site (IRES).
 CC Compounds of the invention are useful to treat a hepatitis C viral
 CC infection and to inhibit the replication of hepatitis C virus. Compounds
 CC of the invention have increased biological penetration into a given
 CC biological system e.g. blood or lymphatic system, increased oral
 CC availability, increased solubility to allow administration by injection,
 CC alter metabolism and alter rate of excretion. The current sequence
 CC represents a peptide inhibitor (HCV Inh 1) used in an example from the
 CC invention as a reference compound in a NS3/NS4a protease enzyme assay.

XX DR New tripeptide compounds are potent hepatitis C virus replication
 XX PT inhibitors useful in the treatment of hepatitis C virus infection.

XX FS Disclosure; Page 24; 84pp; English.

XX CC The invention relates to a tripeptide compound (of formulae given in the
 CC specification) or its salt, ester or prodrug. Also included is treating
 CC hepatitis C viral infection in a subject involving administering a
 CC pharmaceutical composition comprising the tripeptide compound in
 CC combination with a carrier or excipient. The compounds are used for
 CC inhibiting replication of hepatitis C virus (by inhibition of e.g. NS3
 CC protease) in the treatment of hepatitis C virus infection and as
 CC laboratory tool to aid isolation of virally encoded serine protease. The
 CC compound is potent serine protease and HCV replication inhibitor and
 CC lessens the severity and adverse effects of HCV infection. The present
 CC sequence is a control HCV inhibitory peptide used in an assay to

CC determine inhibition of HCV by the compounds of the invention.

 CC the specification. Also included are the preparation of (I) and a method
 CC of inhibiting the replication of hepatitis C virus comprising supplying a
 CC hepatitis C viral NS3 protease inhibitor amount of (I). The method of
 CC inhibiting the replication further comprises concurrent administration of
 CC an additional anti-hepatitis C virus agent such as alpha-interferon, beta
 CC -interferon, ribavirin or adamantane. The additional agent is an
 CC inhibitor of another target in the hepatitis C virus life cycle, which is
 CC helicase, polymerase, metalloprotease or internal ribosome entry site
 CC (IRES). The aza-peptide macrocycles are useful for the treatment of
 CC hepatitis C virus infections. The present sequence is an HCV NS3-NS4A
 CC protease inhibitory peptide used in an NS3-NS4A enzyme assay.

XX New macrocyclic compounds are hepatitis C viral non-structural protein-3
XX protease inhibitors, useful to treat hepatitis C viral infection.
XX
XX Example 215; SEQ ID NO 2; 229pp; English.
XX
XX The invention relates to novel macrocyclic compounds (I). Further
XX disclosed is a composition comprising an anti-hepatitis C virally
XX effective amount of (I) or their salts, esters, or prodrugs in
XX combination with a carrier or excipient. Also disclosed is a method of
XX inhibiting the replication of hepatitis C virus comprising supplying a
XX hepatitis C viral NS3 protease inhibitory amount of (I) and preparations
XX of (I). Compounds of the invention have virucide and hepatitis C viral
XX non-structural protein-3 protease inhibitor activity. (I) are useful to
XX treat hepatitis C viral infection and to inhibit the replication of
XX hepatitis C virus. The current sequence represents the peptide inhibitor
XX HCV Inh 1. This is used as a reference compound in an assay of HCV
XX protease activity and inhibition in an example of the invention.

CC AAY45390 to AAY48214 represent specifically claimed immunogenic peptides
 CC having a human major histocompatibility complex (MHC) Class I (also known
 CC as human leukocyte antigen (HLA)) binding motif. The immunogenic peptides
 CC can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-A2.1, A1, A3.2
 CC or A24.1 or HLA-B or C) and induce a cytotoxic T cell response against
 CC the antigen from which the peptide is derived. Cytotoxic T lymphocytes
 CC (CTLs) which destroy antigen-bearing cells are normally induced by an
 CC antigen in the form of a peptide fragment bound to a HLA molecule, rather
 CC than the intact foreign antigen itself, and are particularly important in
 CC tumour rejection and in fighting viral infections. The peptides are
 CC therefore useful therapeutically to treat or prevent viral infections and
 CC cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B
 CC and C, AIDS, and renal carcinoma. They can be administered as vaccines to
 CC elicit an immune response in individuals susceptible or otherwise at risk
 CC of viral infection or cancer, or used to treat chronic or acute
 CC conditions. They are also useful diagnostically, and can be used to
 CC induce a cytotoxic T cell response, by contacting a cytotoxic T cell with
 CC the peptide e.g. to produce CTLs ex vivo for infusion back into a
 CC patient. The polynucleotides encoding the immunogenic peptides are also
 CC useful therapeutically and for immunisation as above

XX Claim 11; Page 68; 130pp; English.

XX Sequences AAY73103-V73145 represent hepatitis C virus (HCV)-derived MHC
 CC class I (CTL) epitopes which are claimed for use in the present
 CC invention. The invention relates to a novel expression vector comprising
 CC a promoter operably linked to a fusion gene encoding a major
 CC histocompatibility complex (MHC) targeting sequence, and two or more
 CC heterologous peptide epitopes. The MHC targeting sequence may be a class
 CC I targeting sequence, which directs an MHC class I epitope to a
 CC cytosolic pathway or to the endoplasmic reticulum, or an MHC class II
 CC targeting sequence, which directs extracellular antigens to enter the
 CC endocytic pathway to be processed into antigen peptides for presentation
 CC on MHC class II molecules. The heterologous epitopes may comprise either
 CC helper T lymphocyte (HTL) epitopes, or a cytotoxic T lymphocyte (CTL)
 CC epitope and a universal HTL epitope such as a pan DR epitope (PADRE). The
 CC vectors are useful for stimulating an immune response in vivo, as well as
 CC for use in assaying the human immunogenicity of a human T cell peptide
 CC epitope in vivo in a non-human mammal. They provide a nucleic acid
 CC vaccine for enhancing immunity against infectious pathogens, such as
 CC viruses (e.g., HIV, hepatitis B (HBV) and hepatitis C (HCV)), bacteria,
 CC protozoa (e.g., Plasmodium falciparum, the cause of malaria) and also
 CC tumour cells and autoimmune diseases. Universal MHC class II epitopes are
 CC advantageously combined with other MHC class I and class II epitopes to
 CC increase the number of cells that are activated in response to a given
 CC antigen and provide a broader population coverage of MHC-reactive
 CC alleles. (Updated on 06-AUG-2003 to correct OS field.)

 CC the invention are capable of specifically binding glycoproteins encoded
 CC by HLA alleles and inducing a cytotoxic T cell response against an
 CC antigen in a patient expressing HLA-A2.1. This method is useful for the
 CC treatment, prevention and diagnosis of pathological states such as viral
 CC diseases and cancers, including prostate cancer, hepatitis B, hepatitis
 CC C, AIDS, renal carcinoma, cervical carcinoma, lymphoma, and condyloma
 CC acuminatum. The peptides are used for treatment of chronic infection and
 CC for stimulating the immune system to eliminate virus-infected cells
 XX Sequence 9 AA;
 SQ

PI Sette A, Sidney J, Kast WM, Southwood S;
 XX WPI; 2001-582039/65.
 XX Composition for treating viral diseases and cancer comprises an
 PT immunogenic peptide having an HLA-A2.1 binding motif.
 XX Claim 1; Page 68; 85pp; English.
 XX Sequences AAU26558-AAU27161 represent immunogenic peptides containing a
 CC human leukocyte antigen A2.1 (HLA-A2.1) binding motif. The peptides of
 CC the invention are capable of specifically binding glycoproteins encoded
 CC by HLA alleles and inducing a cytotoxic T cell response against an
 CC antigen in a patient expressing HLA-A2.1. This method is useful for the
 CC treatment, prevention and diagnosis of pathological states such as viral
 CC diseases and cancers, including prostate cancer, hepatitis B, hepatitis
 CC C, AIDS, renal carcinoma, cervical carcinoma, lymphoma, and condyloma
 CC acuminatum. The peptides are used for treatment of chronic infection and
 CC for stimulating the immune system to eliminate virus-infected cells

RESULT 131
US-10-044-995-23
; Sequence 23, Application US/10044995
; Patent No. 6872520
; GENERAL INFORMATION:
; APPLICANT: DELEYS, ROBERT J
; POLLET, DIRK
; MAERTENS, GEERT
; VAN HEUVERSWUN, HUGO
; TITLE OF INVENTION: SYNTHETIC ANTIGENS FOR THE DETECTION OF
; ANTIBODIES TO HEPATITIS C VIRUS
; NUMBER OF SEQUENCES: 23
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: NIXON & VANDERHYE P.C.
; STREET: 1100 NORTH GLEBE ROAD
; CITY: ARLINGTON
; STATE: VA
; COUNTRY: USA
; ZIP: 22201
; COMPUTER READABLE FORM:
; MEDIUM TYPE: Floppy disk
; COMPUTER: IBM PC compatible
; OPERATING SYSTEM: PC-DOS/MS-DOS
; SOFTWARE: Patent In Release #1.0, Version #1.30
; CURRENT APPLICATION DATA:
; APPLICATION NUMBER: US/10/044,995
; FILING DATE: 15-Jan-2002
; CLASSIFICATION: <Unknown>
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: 08/391,671
; FILING DATE: <Unknown>
; APPLICATION NUMBER: US 07/920,286
; FILING DATE: 14-OCT-1992
; APPLICATION NUMBER: WO PCT/EP91/02409
; FILING DATE: 13-DEC-1991
; APPLICATION NUMBER: EP 90124241.2
; FILING DATE: 14-DEC-1990
; ATTORNEY/AGENT INFORMATION:
; NAME: SADOFF, B.J.
; REGISTRATION NUMBER: 36,663
; REFERENCE/DOCKET NUMBER: 1487-5

Patent No. 6210903
GENERAL INFORMATION:

APPLICANT:
TITLE OF INVENTION: PROCESS FOR THE DETERMINATION OF PEPTIDES
TITLE OF INVENTION: CORRESPONDING TO IMMUNOLOGICALLY IMPORTANT EPITOPES AND THEIR
TITLE OF INVENTION: IN A PROCESS FOR DETERMINATION OF ANTIBODIES OR BIOTINYLATED
TITLE OF INVENTION: PEPTIDES CORRESPONDING TO IMMUNOLOGICALLY IMPORTANT EPITOPES,
TITLE OF INVENTION: PROCESS FOR PREPARING THEM AND COMPOSITIONS CONTAINING THEM
NUMBER OF SEQUENCES: 453
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25 (EPO)
